

	Intervention Logic - Chain of results	Indicators	Baseline	Current value	Targets	Sources and means of verification	Assumptions
<b>Overall Objective / Impact</b>	<p>Explain to what impact the EU intervention should lead to.</p> <p>Impact is the long term result of the EU intervention expected to be achieved in the social, economic and environmental global context and involving other stakeholders interventions. Impacts are in the sphere of indirect influence of the EU intervention (contribution)</p> <p>Impact 1: Impact 2: etc.</p>	<p>Impact indicators measure the extent to which outcomes change social, economic and/or environmental conditions</p> <p>To be disaggregated by sex (W/M/G/B) where possible</p>	<p>Assessment of the 'point of departure' level</p>	<p>The value of the indicator at the indicated date (it could be daily, weekly, monthly, quarterly, yearly, for the mid-term report or the final report)</p>	<p>Expected 'point of arrival' level</p>	<p>Explain how and when the information to feed the indicators is collected and by who</p>	
<b>Specific Objective / Outcome</b>	<p>Explain what outcome the EU intervention should produce.</p> <p>Outcome (OC) is the medium term result of an EU intervention materialised by a change in behaviour from individuals and/or organisations. Other external factors and players could also influence this behavioural change. Outcomes are in the sphere of direct influence of the intervention (contribution)</p> <p>Outcome 1: Outcome 2: etc.</p>	<p>Outcome indicators measure the extent to which outputs produce, create, lead to the expected behavioural changes from individuals and/or organisations</p> <p>To be disaggregated by sex (W/M/G/B) where possible</p>	<p>Assessment of the behaviours before the launch of the EU intervention</p>	<p>The value of the indicator at the indicated date (it could be daily, weekly, monthly, quarterly, yearly, for the mid-term report or the final report)</p>	<p>Assessment of the behaviours at the end of the EU intervention</p>	<p>Explain how and when the information to feed the indicators is collected and by who</p>	<p>What are the external factors and risks outside the EU intervention control that may impact on the outcome-impact linkage</p>
<b>Operational Objective / Output</b>	<p>List what outputs the EU intervention should produce.</p> <p>Output (OP) is the direct product of activities, produced or accomplished with the resources allocated to the EU intervention. Outputs are in the sphere of control of the EU intervention (attribution)</p> <p>Output 1.1. (related to Outcome 1) Output 1.2. (related to Outcome 1) Output 2.1. (related to Outcome 2) etc.</p>	<p>Output indicators measure the quantity and/or quality of outputs produces by activities</p> <p>To be disaggregated by sex (W/M/G/B)</p>	<p>Zero for outputs produced by new activities or total number of outputs produced by past activities</p> <p>A qualitative assessment could also be done</p>	<p>The value of the indicator at the indicated date (it could be daily, weekly, monthly, quarterly, yearly, for the mid-term report or the final report)</p>	<p>Total number of outputs produced</p> <p>A qualitative assessment could also be done</p>	<p>Explain how and when the information to feed the indicators is collected and by who</p>	<p>What are the external factors and risks outside the Project Manager (or Implementing Partner) control that may impact on the output-outcome linkage</p>
